Explanatory Notes to the Unaudited Preliminary Individual Financial Statements prepared for the year ended on December 31st, 2019

(All amounts are presented in RON, unless otherwise indicated)

The management of the company deems realistic the increase of the production capacity, based on the following premises:

- UE undertakes to implement, by the year of 2050, a neutral economy CO₂ emission-wise;
- Nuclear power is a key contributor to the reduction of the CO₂ emissions. Without the nuclear component, the programme of reduction of the CO₂ emissions cannot be implemented;
- Romania must implement a programme of support of the new electric power generating capacities without CO₂ emissions for the period 2021-2030;
- The nuclear industry is in an advanced stage of identification of technical solutions providing the flexibility of the electric power production, having thus a potential to compensate for the volatility of the renewable sources;
- Romania deems the energetic independence a competitive advantage that needs to be developed;
- Romania is a country with economic development potential, with an ascending trend of electricity consumption;
- The financial markets are characterized by a deficit of financial investments, inducing a low level of the interests, a situation that favors the launch of major investment projects
